

ORSY BULL system description

The system is the show-stopper

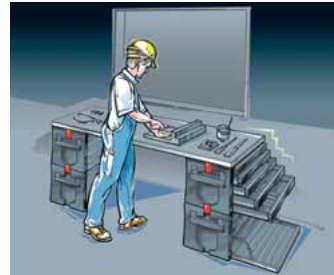

ORSY BULL is a unique product from the Würth

company. With ORSY BULL, you get an unbelievably stable, phenomenally flexible and highly mobile all-purpose product in just a few boxes. With only a few handles, this

tool and small-part storage system becomes a mobile vehicle set-up or a work-bench at the construction site. Whatever you need from the system, it's got it.

The box, that fits.

This system is divided into two series – **Series 5** and **Series 7**. This means that the boxes are matched up in such a way that boxes within a series can be stacked arbitrarily and hooked together this way as well. In addition, the accessory parts are matched to the respective series – see „Accessories“.

The innovations at a glance.

Intelligent

Trouble-free stacking and fixed connection of the boxes via a refined coupling mechanism.

Strong

Even more stable thanks to impact-resistant side sections with bumper function. Made of high-quality plastic. Warp- and corrosion-free.

Useful

Easy locking and unlocking via a special push mechanism.

Secure...

Secure the stacked boxes with the clever theft-protection, a combination of lock and lock holder, available as an accessory.

... is secure

Each box can be equipped with a lock (standard on drawer box and combinationbox) to prevent access to contents. See „Accessories“.

Practical

Large, ergonomically shaped handles for great carrying comfort without painfully digging into your hands.

Well-thought-out

Upright design for easy transport with a hand truck and protection from soiling. Extra option to connect wheels.

High-grade construction

Attractive design made of high-strength, easy-to-clean aluminium: highly rugged, stainless and pleasantly light.

Wraps it all up.
